

Wire Diagram for VDO Small Tachometer

Typical Harness Wire Colors

- Black:** Ground wire. Connects to “-” terminal on gauge. Also to side terminal on bulb.
- White or Gray:** 12v power to bulb. Connects to center terminal on bulb. Goes to 12v positive light wire (brown color) in dash.
- Red/Blue or Blue:** 12v power to gauge. Connects to “+” terminal on this gauge and to Fuse #13.
- Red/White or Red:** Tach signal. Goes to “G” on this gauge and to existing red/white wire in 240 dash (behind main instrument cluster). If no red/white wire found, connect to negative side of coil.
